

Diego Zuccoli

.Net Core Sr. Developer

About me

I was born on September 4, 1986 and I currently live in CABA.

I am a person who enjoys what he does. I learned to program 20 years ago in a self-taught way.

I don't consider myself bilingual but I do get along very well with English. More about me at the end.

Claims

I am open to discussion.

Work experience

Contabilium

2022-Today

I fulfill the role of technical leader of the backend team. I analyze and develop the new architectures that we are using for the implementation of a microservices scheme. I train and support team members. We also managed to put together an architecture for big data and reduce waiting times from 6 minutes to 5 seconds per query

Some tools used: C#, .Net Core 6. Docker. Restful API. GIT. Azure. SQL Server y MongoDB. Dapper. MVC.

CFO Tech

2020-2022

In CFO I am dedicated to the creation of APIs and Web Services using .Net Core.

I trained the team to use GIT on Azure and wrote the usage guide and good practices for use by all development teams. I programmed a service that replaces the Lapos, so that an equipment is no longer needed by each programmer.

Some tools used: C#, .Net Core 2, 3 & 5. Docker. Restful API. GIT. Azure. SQL Server & Oracle. Whales. API Manager. Entity Framework. MVC.

SML - Experta ART

2019-2020

I spearheaded the migration to API Rest technologies using .Net Core 2.2 and then 3.1.

I wrote the error handling middleware, data log, Healthcheck and Swagger.

I set up the environments in Docker and the migration of all sources to GIT environments (before they only had a shared folder).

I trained the team so that they could continue those same developments and later make APIs on their own.

Some tools used: VB .Net, C#, .Net Core 2.2 & 3.1. Jenkins. Docker. Restful API. GIT. SQL Server & Oracle. Whales. API Manager. Entity Framework. MVC.

Qstom

2017-2019

At Qstom I was in charge of maintaining and developing the Cyberseg system. This system handles everything that an insurance broker does (policies, endorsements, insured, interfaces, reports, settlements, etc.)

Some tools used: VB .Net, C#, Team Foundation. SQL Server. MVC.

InMotion GIT

2013-2017

I worked for the Galicia Seguros and Prudential Seguros projects. Both VTime systems. The difference with the Sancor Seguros project is that while at GIT I was part of the core application development team and at Sancor I was mostly an incident resolution table. At GIT I learned about broad topics in the world of insurance such as issues, client portfolio, commissions, billing, shipments to payment methods, imputation, etc.

Some tools used: Net, SQL, Oracle, HTML, JS, Crystal Reports

Sancor Seguros

2012-2013

I worked solving incidents in a development table for VTime of Sancor Seguros. I had the opportunity to travel to Santa Fe to meet Sancor Seguros, one of the largest insurance companies in Latin America. Here I learned the basics of insurance.

Some tools used: Net, SQL, Oracle, HTML, JS, Crystal Reports

Mastersoft

2009-2012

I worked as a programmer in a work team. The systems we made were very varied as well as the technology used since it was a software factory.

Some tools used: Net, SQL, Oracle, HTML, JS, Crystal Reports

UOCRA

2007-2008

I was hired to make changes to an ex officio cursor administration system that UOCRA imparted together with the National Government.

Some tools used: VB6, Access, SQL

More about me:

I like to program with Arduino or some other microcontroller like ESP8266.

I am also interested in 3D printing, I have 3 printers, a filament Ender 5, a resine Halot One and another filamente that I built myself. These interests together allow me to do personal projects such as modifying the doorbell of my house so that it sends notifications by Telegram when it rings or remotely control LED lights.

Out of all this I collect action figures from the 80s and 90s, for example He Man or Silverhawks.

I watch a lot of YouTube, especially channels in English. This helps me practice understanding. I also like to watch movies and series.

I live with my cats Mandy and Tyrell.

As for music, I have been a KISS fan since I was 13 years old. I have several autographs, picks, and other memorabilia from the band. One of my greatest joys was shaking hands with Gene Simmons.
